# The Behavioral Sciences and Health Care

Edited by *Olle-Jane Z. Sahler & John E. Carr*

With 68 contributors from leading medical teaching faculties

This book is designed for medical students and trainees. It presents succinct information about the wide variety of behavioral, social, and psychological sciences that comprise the behavioral sciences relevant to health and wellness. Brain and behavior, culture and ethnicity, complementary medicine, clinical decision-making, and psychopathology are featured sections. Each chapter begins with guidance questions and ends with current recommended readings and review questions. A complete 300+ question-and-answer USMLE-type review section not only allows readers and students to check how well they have learned the material, but also highlights important points and adds additional specific information to supplement the text.

A clearly structured text on the behavioral sciences for medical and other students, including practical features such as annotated review questions and a practice exam.

The authors of this text are experienced teachers and researchers drawn primarily from the membership of the Association for the Behavioral Sciences and Medical Education. A companion "Instructor's Manual" will be available online to provide creative ideas for teaching that capitalize on experiential learning.

A free sample chapter can be downloaded from [www.hhpub.com](http://www.hhpub.com)

2003, 432 pages, softcover, 7" x 10"
